

EMTELLE

EM-MARKER

2-IN-1 DETECTION MARKER PEG

Location marker and watertight end cap in one

Locatable underground position at the property line for drilling the last drop

Creates a locatable branch by accompanying the EM-Bend

EM-MARKER

2-IN-1 DETECTION MARKER PEG

As traceability is playing an increasingly important role in a sustainable broadband network, Emtelle offer the EM-Marker - a 2-in-1 detection marker peg, which is not only a handy location tool, but also serves as a watertight end cap for microducts or can even be fixed into our EM-Bend Solution.

Due to the small size and the multipurpose approach, the EM-Marker can be your perfect solution for a quick & easy installation in small trenches.

EM-MARKER BENEFITS

At Emtelle, we know that customers want a practical and affordable location option - particularly when branching to the boundary, when storing an overlength drop duct in the front yard or for locating the end of a microduct route. The EM-Marker can easily be located with the use of locators (101,4 kHz) which every installer will have as part of their tool kit.

The EM-Marker offers the following benefits:

- Serves as a watertight end cap for microducts 7 - 16mm to locate the end of a route or overlength storage
- Can be placed onto a branched microduct length at the property line to create a locatable underground position for drilling the last drop with Drop Drill at a later date
- Small in size, ideal for placing in small trenches or at the property line - perfectly fits into the EM-Bend Manager to be able to locate the branch

IP68

15 bar pressure tight with
reducer (optional)

Combined with
EM-Bend
