

Fibre Locking Mechanism for Ultra-Lightweight Overhead Cables

Product Description

The Fibre Locking Mechanism (FLM) is a locking mechanism essential for 'loose' jacketed element or elements in an overhead cable. The FLM provides an effective solution that isolates the termination of the fibres, either spliced or connectorized, in the fibre enclosure from the 'in span' environmental loading (ice and winding).

The FLM attaches to a wooden pole with 4 fixing screws. A number of FLMs can be fitted on a pole in line and is designed to form a 'bridge' over other cables fitted to a pole.

Product Description

Overall Dimensions (w x h x d) – 100 x 215 x 75mm

Part No.	Description	
74523	Fibre Locking Mechanism
