PRODUCT OVERVIEW

Emtelle has developed a unique range of Power Duct solutions designed to meet the performance requirements from Underground Power Cables.

Class 1 Interference Ring Seal (IRS) Features and Benefits

- Meets UK Industry Standards ENATS12-24 Class 1
- Used extensively in the Power & Data Centre Sectors.
- Unique Interference Ring Seal Socket meets IP57 & IP68 classifications for water ingress protection (as per BS EN 60529).
- Solid wall uPVC Power Duct offers high resistance to impact and compression. (450N compression at operating temperature of 75°C).
- Ease of cable placement, with low friction inner surface bespoke long radii bends to meet the requirements of the latest generation of power cables. This reduces whole system costs as longer cabling distances can be achieved, resulting in reduction in expensive cable joints.
- All PowerProtect+ Duct is supplied with an internal de-burr on the spigot ends of ducts which ensures no damage during cable placement and in turn improves cable lifespan. IRS duct also features an externally chamfered spigot end to allow for a smooth installation into an IRS socket.
- Enhanced cable performance through efficient heat dissipation offered by uPVC Power Duct, due to the high compression to wall thickness ratio, compared with alternate systems.
- Comprehensive product range available, covering all possible cable requirements and construction techniques.
- PowerProtect + Duct Systems are re-useable when cables are replaced or repaired, therefore maximising asset life and reducing further disruptions to the roadways and footways.
